

Fluid Dispenser

Pen with Nylon Brush Tip

QTEK are proud to announce the addition of a superb new cost effective, user-friendly fluid-dispensing product to their wide range of consumables, the QTEK Fluid Dispenser Pen with Nylon Brush Tip

General Information

The QTEK Fluid Dispenser Pen with Nylon Brush Tip is a unique addition to the QTEK range. QTEK currently manufacture a wide range of multifunctional fluid dispensing pens ideal for a variety of applications including the dispensing of solvents, lubricants, masking, RMA chemistries, adhesives and water-based liquids. 2006 saw the launch of the QTEK Fluid Dispensing Pen with Nylon Brush Tip and it was received very well by customers worldwide due to its innovative design.

About QTEK Fluid Dispenser Pen with Nylon Brush Tip

The QTEK Fluid Dispenser Pen with Nylon Brush Tip consists of a lightweight polypropylene cartridge with a fine nylon brush tip, and has a capacity of 7cc. The fine nylon brush tip allows users to reach even the smallest of areas, which is particularly useful when dealing with minute components. The use of the QTEK Brush Tip Pen is also valuable in complicated assemblies where precision and accuracy is required and ultimately increases production efficiency.

Advantages of Using QTEK Fluid Dispenser Pen with Nylon Brush Tip

The QTEK Fluid Dispenser Pen with Nylon Brush Tip is especially designed to minimise waste and is economical in its use. The pen can fit easily in the pocket of a lab coat and the unique design of the QTEK Brush Tip Pen prevents leakage.

The QTEK Fluid Dispenser Pen with Nylon Brush Tip avoids the limitations associated with flux

dispensing bottles in the application process, not only does it control the flow of flux in accordance with the requirements of the welding area, it also serves to simplify the operation process, with added security and reliability.

Applications of QTEK Fluid Dispenser Pen with Nylon Brush Tip

The QTEK Fluid Dispenser Pen with Nylon Brush Tip is designed to provide the user with ultimate control over the amount of fluid being dispensed, as the user must apply light pressure to either side of the barrel to dispense the fluid. The increase in control over the amount of fluid dispensed makes the QTEK Brush Tip Pen ideal for dispensing solvents during complex assemblies.
